eGauge Systems

eGauge CT Extension Kit

This kit allows easy extension of CTs without splicing or modifying the CT leads. The CT Extension Kit uses the eGauge Sensor Hub's unpowered inputs to route up to 4 CT signals through a CAT5 cable.

The kit includes the Sensor Hub, CAT5 coupler, and a 16" CAT5 to 2-pin plug breakout cable.

A custom length of CAT5 (Ethernet) cable is not included and required between the Sensor Hub and CAT5 coupler.

The Sensor Hub must be installed in a junction box or external enclosure outside of the distribution panel.
